

# Appraisal Firewall

Overview

## What is Appraisal Firewall?

Technology that Increases Appraisal Efficiency, Safety and Soundness

Appraisal Firewall is a secure, web-based residential and commercial appraisal ordering solution for mortgage departments to work directly with their trusted local appraisers. Appraisal Firewall helps lenders comply with all appraisal regulations while increasing the speed of Loan Production and Underwriting.

## Appraisal Ordering

Appraisal orders are placed in a double-blind manner by Production staff to appraisers on the panel you set up. Production staff does not know which appraiser receives the order. Rotation Managers have access to all Loan Production and Appraiser activity every step of the way so that you always get independent appraisals, and all activity is logged to help protect from audits and related penalties and/or fines.
